

**Chromatics Data**

Defining Insights for you

Leveraging the data in an exemplary form  
and turning it into business intelligence with  
our competence.

## Our Vision

Every business is working with some pace or the other but for that extra boost or spark to outshine yourself you need to have technical insights for better targeting, new innovations, solution for lagging behind, to anchor your strategies and a lot more. We are here for that process of acceleration by helping you make practical solutions which you might have thought are of no use.

The team of **Chromatic Data** is here to assure you of your success by offering you the vast potential of data analytics by which you can gain operational and business progression like never before.

Data Analysis is a strategic asset and to work faster and to stay agile in it gives the organisation a competitive edge they didn't have before. Monitoring for extraction of data is typical to improve decision making in a wide realm of activities.

Data being your strength why not to mine value out of it for critical insights and move towards success as analytical strategies dramatically shift how decisions are made in an organisation. A smart strategy would be joining hands with us so we can focus on the steps you need to achieve your goals.

## Our Services

- ✓ We provide free of cost high level consultancy for infrastructure monitoring.
- ✓ We create a monitoring setup for our clients to help them keep a close watch on their entire ecosystem.
- ✓ We serve clients of all sizes - small, medium, large
- ✓ Our services include but not limited to OS monitoring, application monitoring, dashboarding, reporting, alerting, predictive analytics, ITSM integration.
- ✓ Post implementation, we provide exhaustive trainings to our clients so that they can self-manage the setup to save cost. But no worries! we are always available for support as and when required.
- ✓ We have expertise in creating customized Splunk applications for our clients which can be a gamechanger and can drastically increase their clientele.
- ✓ We understand the pace with which analytics product market is growing. Our R&D team continuously looks for various tools/products available in the market. So that our consultants can provide the best possible solutions.

## Benefits You Get

Unifying the data and observing the lowest layer of it would help generate new opportunities and prevent unplanned disruptions.

By making you do something divergent we would help you grow in the industry you deal in, by helping you with your intricate snags

By automating your desired reports in the way you want them and eliminating human factor would even eliminate human errors.

Clear visibility of your data from time to time, reduces the risk of threat and makes you proactive to take decisions which would benefit you.

Moving forward with a sustainable approach by applying resources to the limit needed, would help you minimize the cost of your operations.

Will make you focus on the derivable which matter. which would then give you a focused exposure with more efficiency of your own organisation.

A simplified view of the whole IT network would help you identify the lags in your organisation and then turning the same into opportunities is going to be our call.
