Defining Insights for you

**Fusing your Product Intelligence with Splunk**

Our Vision

To bind your strengths and to make you grow by increasing your target audience which is still untouched. we are here with the deftness to convert the intelligence of your product into Splunk application.

Integration of your data on such a software which is in high demand would lead to offer enhancements.

At a time when integrating and correlating the data is needed don't hinder yourself in the chaos of IT but rather move towards the best technology available which can make your job easy. Reach the potential buyers of your service by increasing the intelligence of your product by the vast potential of your presence on a platform like Splunk.

Accelerate your development and testing which would help you reduce the cost of implementation and hence increase your adaptability.

Benefits You Get

Ease of Adaptation- One need not find different means to get value out of his data, Splunk application makes it easy for Clients, as it can be easily adapted.

Reduced Integration Time- Fusion time of two platforms being reduced as Splunk would then be acting as the mother platform for synchronisation. Just Plug and play.

Reporting and alerting features not available on standard Platforms but packaged with Splunk Applications

Enhanced Graphical user Interface- Splunk applications has the capability to enrich your existing product's graphical user interface packaged with more features of Splunk.

Increased Clientele pool- The model of low-cost development and low cost in sales bring in more customers resulting in more revenue. Almost every big giant around the globe is using Splunk

Minimum Hardware requirements- The cost of implementation would be almost nothing for the customer who is already using Splunk

Low cost maintenance- Splunk would even reduce your maintenance expenses as a hardware requirement for an application like this is minimal.

Splunk Applications created so far in Domains

Threat Intelligence

Malware Protection

Application Monitoring Tools

SCM (Source code management) Tools

Devops Automation

ITSM Automation
